

Tutorial 2: MA1E01

Limits

1. Consider the functions graphed below.

- (a) For the first graph, find

$$\lim_{x \rightarrow 0^-} f(x), \quad \lim_{x \rightarrow 0^+} f(x), \quad \lim_{x \rightarrow 0} f(x), \quad f(5)$$

- (b) For the second graph above, what values of x_0 does the limit $\lim_{x \rightarrow x_0} f(x)$ not exist?

2. By evaluating the function at the x -values $x = \pm 0.25, \pm 0.1, \pm 0.001, \pm 0.0001$, make a conjecture about the limit (if it exists)

$$\lim_{x \rightarrow 0} \frac{\sqrt{x+1} - 1}{x}$$

3. Compute the following limits:

- (a)

$$\lim_{x \rightarrow 2} 2x^5 - 9x^2 + 7$$

- (b)

$$\lim_{x \rightarrow 6} \frac{x-6}{x^2-36}$$

- (c)

$$\lim_{x \rightarrow 9} \frac{x-9}{\sqrt{x}-3}$$

$$\frac{x-3}{(x-3)(x+3)} = \frac{1}{x+3}$$

1

2

$$\frac{1}{2} - \frac{1}{2} = 0$$

$$\frac{1}{2} - \frac{1}{2} = 0$$

increasing trend

$\lim_{x \rightarrow x_0^-}$	a	a
$\lim_{x \rightarrow x_0^+}$	a	b
$\lim_{x \rightarrow x_0}$	c	0 ist bestimmt

$$\lim_{x \rightarrow 0} \frac{1}{x} = \infty$$

$$\lim_{x \rightarrow 0} \frac{1}{x} = \infty$$

$$2(2^3) - 9(2^2) + 7$$

$$\frac{x-6}{(x-6)(x+6)} = \frac{1}{x+6}$$

$$\frac{x-9}{(\sqrt{x}-3)(\sqrt{x}+3)} = \frac{\sqrt{x}-3}{(\sqrt{x}+3)}$$

$$\frac{1}{2} - \frac{1}{2} = 0$$

$$1 + \frac{n}{b} \frac{f}{f} \quad 1 + \frac{n}{b} \frac{f}{f} \\ 2 + b + 1 -$$

(d) $\lim_{x \rightarrow \infty} \frac{x-7}{x^2+2x-3} = \frac{\frac{x}{x}}{\frac{x^2}{x^2} + \frac{2x}{x^2} - \frac{3}{x^2}} = \frac{1}{1+2-\frac{3}{x^2}} = \frac{1}{0} = \infty$

(e) $\lim_{x \rightarrow \infty} \frac{\sqrt{16x^2-3}}{x+3} = \frac{\sqrt{\frac{16x^2}{x^2} - \frac{3}{x^2}}}{\frac{x}{x} + \frac{3}{x}} = \frac{\sqrt{16 - \frac{3}{x^2}}}{1 + \frac{3}{x}} = \frac{4}{1} = 4$

(f) $\lim_{x \rightarrow \infty} (\sqrt{x^2-3} - x) = \frac{(\sqrt{x^2-3} - x)(\sqrt{x^2-3} + x)}{\sqrt{x^2-3} + x} = \frac{-3}{\sqrt{x^2-3} + x} = 0$

4. Find the horizontal and vertical asymptotes of the function

$$f(x) = \frac{3x^2 - x - 2}{2x^2 + x - 3}$$

and sketch a graph of the curve.

5. Find the largest open interval centered at $x = 1$ such that for each x in the interval, $f(x) = 3x^2 + 2$ is within $\epsilon = 0.1212$ units of $f(1) = 5$.

6. From the formal definitions of limits (the "epsilon-delta" formalism), prove the following limits:

(a)

$$\lim_{x \rightarrow 0} \frac{2x^2 + x}{x} = 1$$

(b)

$$\lim_{x \rightarrow 2} f(x) = 5, \text{ where } f(x) = \begin{cases} 9 - 2x, & x \neq 2 \\ 49, & x = 2 \end{cases}$$

(c)

$$\lim_{x \rightarrow -\infty} \frac{4x-1}{2x+7} = 2$$

$$-\epsilon < f(x) < \epsilon \quad \text{if} \quad -\delta < x < \delta$$

$$\lim_{x \rightarrow 0} \frac{2x^2 + x}{x} = 1$$

$$\left| \frac{2x^2 + x}{x} - 1 \right| < \epsilon \quad 0 < |x| < \delta$$

$$\Leftrightarrow \left| \frac{2x^2 + x - x}{x} \right| < \epsilon \quad 0 < |x| < \delta$$

$$\Leftrightarrow \left| \frac{2x^2}{x} \right| < \epsilon \quad 0 < |x| < \delta$$

$$\Leftrightarrow |2x| < \epsilon \quad 0 < |x| < \delta$$

$$\Leftrightarrow |x| < \frac{\epsilon}{2} \quad 0 < |x| < \delta$$

$$\frac{\epsilon}{2} > 2 - x$$

$$\delta = \frac{\epsilon}{2}$$

$$\delta > |2 - x| > 0$$

$$\delta > |0 - x| > 0$$

$$\left(\frac{\epsilon}{2} \right)$$

$$y = (x+2)^2$$

$$\frac{\epsilon}{2} > 2 - x$$

$$\delta > |2 - x|$$

$$\delta > |0 - x|$$

$$\delta > |7 - x|$$

$$x = \frac{\epsilon}{2}$$

$$x = \frac{\epsilon}{2}$$

$$x = \frac{\epsilon}{2}$$

$$x = \frac{\epsilon}{2}$$

$$x = \frac{\epsilon}{2}$$

$$x = \frac{\epsilon}{2}$$
