

## 10/05/16 IS MANAGEMENT AND GOVERNANCE

- CIO manages the IT function of an organisation - can be in house or outsourced
- Three models of IS: IS is part of the organisation, IS is the organisation and the organisation is a customer of IS (Outsourcing)
- Four structural types: Hierarchy/Matrix, Business unit, centralised/decentralised and internal or external
- Federal IT attempts to capture the benefits of centralised and decentralised organisations while eliminating the drawbacks of each

### Centralised vs Decentralised

- |  |   |
|--|---|
| - Global standard and common data                        | - Technology may not meet local needs               |
| - "one size" when negotiating supplier contracts         | - Star support for strategic initiatives            |
| - Greater leverage in deploying strategic IT initiatives | - Us versus them mentality when problem occurs      |
| - Economies of scale and shared cost structure           | - Lack of business unit control over overhead costs |
| - Access to a larger capacity                            |   |
| - Better recruitment and training of IT professionals    |   |
| - Better control of security and databases               | ZARA vs   |

### Decentralised

- |  |  |
|--|--|
| - Technology customised to local business needs    | - Difficulty maintaining global standard and consistent data |
| - Closer partnership between IT and business units | - Higher infrastructure costs                                |
| - Greater flexibility                              | - Difficult negotiating preferred supplier agreement         |
| - Reduced telecoms costs                           | - Loss of control  |
| - Business unit control over overhead costs        | - Duplication of staff and data                              |

### Lean IT

- IT responsibilities center on creating productivity and capability in support of strategy
- Management challenge - concentrating internal resources on realising value in a multi-Sourced environment
- Technology - networked across a range of enterprise, partner and the cloud
- Organisation - leveraging business and technical skills along with Sourced partners
- Performance metrics - Success measured against changes in business performance

## The CIO Role

- CIO usually most senior IS executive in the enterprise
- Responsible for technology vision
- Leadership for designing, developing, implementing and Managing IT initiatives
- Focus on operating effectively in a constantly changing and intensely competitive market
- Work with executive team in strategy formulation process
- Used technology as the core tool in creating competitive advantage and aligning business and IT strategies
- Key responsibilities:
  - Leading - creating vision by understanding the business
  - Governing - establishing an IS governance structure
  - Investing - shaping the IS portfolio
  - Managing - establishing credibility, Managing IT functions and fostering change

## GOVERNANCE

- "Corporate governance is the system by which companies are directed and managed. It influences how the objectives of a company or the company are set and achieved, how risk is monitored and assessed and how performance is optimised."
- Governance - a slippery concept: "All processes that coordinate and control an organisation (it resources and assets)"
- 5 Goals of IT Governance
  - Value delivery
  - Risk management
  - Performance Management
  - Resource management
  - Strategic alignment
- Governance about deciding who makes the decision, management is about making the decision once decision rights have been assigned
- Forms of governance:
  - Structural Integration: formal structures are established within an organisation  
e.g. reporting relationships, Direct line supervision of staff, Matrix roles
  - Horizontal Integration: structural overlaps that require precise coordination  
e.g. groups, committees or open plan offices

### SoX Financial Controls

- Auditors must certify the underlying controls and provide that are used to compile a company's financial results
- Companies must provide real time disclosure of any events that may affect a firm's stock price or financial performance within a 48 hour period
- Penalties for failing to comply range from fine to 20 years jail term
- IT plays a major role in ensuring the accuracy of financial data.

### SoX IT Controls

- Five control weaknesses are repeatedly uncovered by auditors:
  - Failure to segregate duties within applications as well as failure to set up new accounts and terminate old ones in a timely manner.
  - Lack of proper oversight for making application changes, including appointing a person to make a change and another to perform quality assurance on it.
  - Inadequate review of audit logs to ensure that systems were running smoothly and that there was an audit log of the audit log.
  - Failure to identify abnormal transactions in a timely manner.
  - Lack of understanding of key system configuration.
- IT managers must assess the level of controls needed to mitigate potential risks in organisational business process.

### COSO

- Framework for implementing SoX
- Created 3 control objectives for management and auditors that focused on dealing with risks to internal control: Operations, Compliance, Financial Reporting
- 5 essential components control components for management and auditors:
  - Control environment - address the overall culture of the company.
  - Risk assessment - most critical risk to internal controls
  - Control processes - outline important processes and guidelines
  - Information and communication of the procedures
  - Monitoring - by management of the internal controls

10/05/16

## IS MANAGEMENT AND GOVERNANCE

- SoX:
  - requires public companies to define their control frameworks
  - Recommends COSO as the baseline framework for general accounting
  - Not IT specific

### COBIT Standard

- Control objectives for information and related technology
- International Standard for IT governance
- It is a supporting tool that allows managers to bridge the gap between control requirements, technical issues and business risks
- Does this by:
  - Making a link to the business requirement
  - Organising IT activities into a generally accepted process model
  - Identifying major IT resources to be leveraged
  - Defining the management control objectives to be considered
- Use:
  - Benchmark
  - Goal and Method
  - Activity goal
- 5 principles:
  - Meeting stakeholders needs
  - Covering the enterprise end to end
  - Applying a single integrated framework
  - Enabling a holistic approach
  - Separating governance from management

### ITIL - Information Technology Infrastructure Library

- A set of practices for IT service management that focuses on aligning IT services with the needs of business
- Comprises of procedures/books, processes, checklists that are not organisation specific, used for establishing integration with the organisation's strategy, delivering value and maintaining a minimum level of competence
- It allows the organisation to establish a baseline from which it can plan, implement and measure
- It is used to demonstrate compliance and to measure improvement
- Guidelines available for: Infrastructure, development, operations, security

10/05/16

## IS MANAGEMENT AND GOVERNANCE

Governance mechanisms

Functional Integration mechanisms:

- Ratcheting authorization procedures
- Decision making protocols: - who makes it? at what level? who is consulted? Principals?

Social Integration mechanisms:

- How to achieve shared understanding
- Developing shared beliefs
- Developing trust and mutual understanding (social events etc)

Supplemental/Supporting Mechanisms:

- Budgets
- Training
- Key performance indicators
- Charge backs

External Controls:

- Auditors
- Review Committee
- Peer review
- Benchmarking

Oversight versus Systemic

- |              |                           |                       |             |                  |
|--------------|---------------------------|-----------------------|-------------|------------------|
| - Oversight: | • Reporting Relationships | • Checklists          | • Processes | • Procedures     |
|              | • Forms                   | • Authorization level | • Hierarchy | • Steering group |

Advantages - tighter control, better risk management, no ambiguity, clear line of authority and responsibility

Disadvantage - Bureaucratic, expensive, inflexible, disempowering, unresponsive

- Systemic: Culture, Structure, Internal economy, methods and tools/standards, metrics and rewards

Sarbanes - Oxley Act of 2002

- Enacted to increase regulatory visibility and accountability of public companies and their financial health
- All corporations under the SEC are subject to Sox requirements
- CEO's and CFO's must personally certify and be accountable for their firm's financial records and accounting
